## PROJECT QUICK FACTS

### Principal Investigator

**Prof. TANG Ming Kuen Patrick**  
DEPARTMENT OF ANATOMICAL AND CELLULAR  
PATHOLOGY

### Prof. LAN Hui Yao

CHOH-MING LI PROFESSOR OF BIOMEDICAL  
SCIENCES

### Funding Sources

Innovation and Technology Commission, Research Grants Council, The Chinese University of Hong Kong Faculty of Medicine, Guangdong Science and Technology, The Lui Che Woo Institute of Innovative Medicine

### Publication

LI C, Xue VW, Wang QM, Lian GY, Huang XR, Lee TL, To KF, Tang PM, Lan HY. The Mincle/Syk/NF-kappaB Signaling Circuit Is Essential for Maintaining the Protumoral Activities of Tumor-Associated Macrophages. Cancer Immunol Res. 2020 Aug;8(8):1004-1017.

### Patent

1 US Provisional Filed and 1 Hong Kong Application

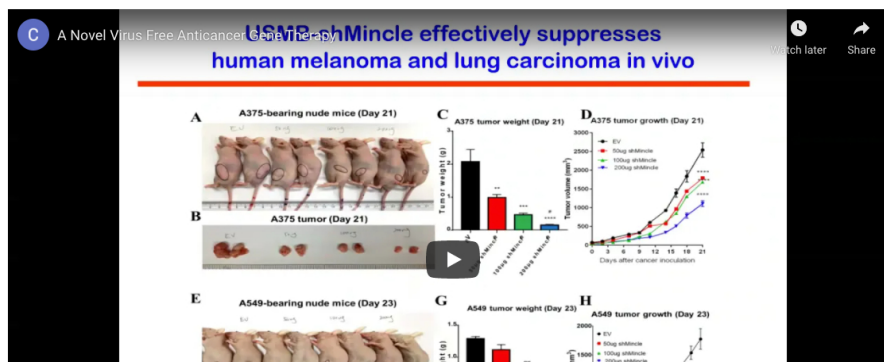

### Award

Gold Medal with Congratulations of the Jury, International Exhibition of Inventions Geneva 2021

Gene therapy conventionally utilizes virus to correct diseased genes for eliminating cancer, but safety risks and off-target effects of viral method largely limit their clinical translation.

Therefore, CUHK team combined RNA interference technology and ultrasound microbubble system to form a novel virus-free gene therapy. The invention specifically delivers gene silencing particles into tumor without using any virus. It can serve as a rapid evaluating platform for therapeutic efficiency of new gene targets preclinically, as well as development to be a safe anticancer therapy clinically.

	Conventional method	Method in This Project
Safety	<ul style="list-style-type: none"><li>Delivery by virus</li><li>Permanent change</li></ul>	<ul style="list-style-type: none"><li>Virus-free</li><li>Reversible</li></ul>
Flexibility	<ul style="list-style-type: none"><li>Genomic level</li><li>Cannot target post-transcriptional level</li></ul>	<ul style="list-style-type: none"><li>mRNA level</li><li>Can design for any new gene isoforms</li></ul>
Precision	<ul style="list-style-type: none"><li>Relatively low</li><li>Systemic diffuse</li><li>Affect all tissues</li></ul>	<ul style="list-style-type: none"><li>High</li><li>Tissue-specific</li><li>Release in tumour</li></ul>

[Patrick MK Tang and HY Lan. Innovative Technology Fund 2019-2020 (Ref.: ITF/068/18)]

In our invention, the gene-silencing particles are specifically delivered to tumor by ultrasound microbubble system.

Our new method effectively stops the growth of human lung cancer by largely enhancing the anticancer immunity (iNOS+ F4/80) in tumor.

## Control 對照組

## Virus-free Gene Therapy 無病毒基因治療

Our method (right), the gene-silencing plasmids (green) can be specifically delivered to tumor, avoiding off-target side effects of gene therapy.

CE's Reception for Awardees of International Exhibition of Inventions of Geneva 2021
